Ajay Patidar

Senior JavaScript Engineer

Jun 2014 - Present

I'm a technologist with knowledge of developing and delivering modern-day Apps for both web and mobile platforms.

I'm enthusiastic about everything related to technology and design, and that includes stuff like console games, gadgets, computers. I'm proficient in working with technologies like Node.js, Docker, React, Redux, Databases (SQL and NoSQL both).

WORK SAMPLES

Senior Fullstack Engineer - Acceleratorapp

https://acceleratorapp.co

Acceleratroapp is a startup accelerator platform where various tools are provided in order to help identifying best suitable individuals and startups to hire/invest/train.
Each individual is responsible for directly collaborating with CEO and Product team to prototype,
design and deliver the UI and UX experience with a lean design process: research, design, test, and iterate.

We work as a Kanban team, where all of us self-responsible for grooming features (by communicating with PO), developing and ultimately delivering them

Technology: React, Nodejs, MongoDB, ElasticSearch, Graphql, Typescript, Jest, AWS & lots of other 3rd party integrations

Senior Frontend Engineer - Glints

https://glints.com

Created online talent recruitment and career discovery platform using ReactJS Developed a web application that behaves differently for various config subdomain - where each sub domain belonged to a different whitelabel company

Technology: ReactJS, Node.js, Mocha, TypeScript, bit.dev, Docker, Rancher, Postgres, ElasticSearch

Indore

Frontend Technologies

Javascript & Typescript
React & React Native
Redux, Redux Saga, bit.dev,
Next.js, Storybook
Material-UI, AntD

Backend & Devops

Node.js & Firebase
MongoDB, Redis & Graphql
Docker & docker-compose
Common GCP Tools like
Compute Engine, Cloud
storage, Cloud CDN etc.
CI/CD with Netlify, Github
workflows, gitlab-ci and
bitbucket-pipelines

Other Tools

Git, JIRA, Trello, Clubhouse

Languages

Hindi (native)
English (professionnal)

Frontend Engineer - SanUI

https://app.santiment.net

SanUI is an internal component library of whole santiment app.
It is a collection on small react components on top of which
santiment webapp is created. Also there are various micro-frontends
(e.g. line charts, graphs) that are plugged in at various places as it is to
maintain consistency across the design system.
I was responsible to create highly reusable components regardless of
the application's requirements so that they can be treated as generic
ones. We tried to practice the TDD approach here to keep the
expectations very clear from the very begining and boost the generic
nature of components.

*Technology: ReactJS, Node.js, Storybook, SemanticUI, Graphql, Jest,
Webdriver.io*

EDUCATION

Bachelor of Science

Astral Institute of Research & Technology

2010 – 2014, Indore
